

ConfirmAm Frontend Architecture & Design System

Overview

ConfirmAm is **not a banking application**.

It is a **software payment terminal**.

Every screen, interaction, animation, and colour decision should reinforce one feeling:

Confidence.

The interface should communicate certainty, speed, and trust while remaining effortless to use in busy shops, markets, restaurants, and roadside businesses.

The application should feel closer to operating a POS terminal than navigating a traditional fintech app.

Design Philosophy

Our interface is guided by five principles.

1. Glanceability

Merchants should understand the current payment state within one second.

No screen should require reading long paragraphs or interpreting complex charts.

Large typography.

Clear hierarchy.

Minimal distractions.

2. Motion with Purpose

Animations should communicate state changes.

Never decorate.

Examples:

- Payment received
- Connection restored
- Transfer completed
- Payment pending

Every animation should answer:

"What just happened?"

3. One-Handed Operation

Most merchants use one hand while serving customers.

Every primary interaction should be reachable using the thumb.

Buttons should be large.

Important actions should stay near the bottom of the screen.

4. Audio First

The merchant should never need to stare at the screen.

Voice confirmations become part of the interface.

Visuals simply reinforce what has already been announced.

5. Calm During Success

Receiving money should feel satisfying.

The interface should celebrate successful payments without becoming noisy.

Think:

POS terminal.

Not casino.

Brand Personality

ConfirmAm should feel:

- Confident
- Fast
- Friendly
- Dependable
- Modern
- Practical

Avoid interfaces that feel:

- Corporate banking
 - Crypto exchange
 - Accounting software
 - Admin dashboard
-

Visual Identity

Primary Colour

Deep Emerald

Represents:

- Money
- Success
- Trust
- Growth

Suggested

#0F8F5F

Secondary Colour

Midnight

#111827

Used for:

- Headers

- Navigation
 - Text
-

Accent Colour

Electric Lime

Used only when money arrives.

#7CFF6B

This colour should appear almost like the "beep" of a POS machine.

Very little.

Very intentional.

Surface

Soft Warm White

#FAFAF8

Not pure white.

Makes long usage more comfortable.

Error

Coral Red

#EF4444

Warning

Amber

#F59E0B

Typography

Use

Inter

or

Geist

Weights

- 700 Headlines
- 600 Important Numbers
- 500 Labels
- 400 Body

Amounts should dominate every payment screen.

Example

¥5,000

should occupy almost half the screen.

Iconography

Use

Lucide Icons

Icons should be outlined.

Avoid filled icons.

Border Radius

Large

20px

Feels modern and approachable.

Shadows

Very soft.

The UI should feel lightweight.

Never heavy.

Layout

The application has five primary sections.

Dashboard

Receive Payment

Send Money

Transactions

Profile

Bottom navigation only.

Never sidebar navigation.

Dashboard

Purpose:

Instant awareness.

Shows:

- Today's Revenue
- Payments Today
- Recent Activity
- Receive Payment
- Send Money

No charts in MVP.

Numbers matter more.

Receive Payment Screen

This is the hero screen.

It should feel like a POS terminal waiting for payment.

Layout

When payment arrives

The screen transforms.

Large green confirmation.

Success animation.

Voice plays.

Screen glows briefly.

Payment Confirmation Experience

This is the signature interaction.

Sequence

1.

Payment arrives.

↓

2.

Phone vibrates.

3.

Screen briefly pulses emerald.

4.

Large checkmark appears.

5.

Voice says

"Payment of ₦5,000 received from Adeyemi."

6.

Transaction slides into history.

Total duration:

Under two seconds.

Send Money

Feels like composing a payment.

Steps

Select Bank

Enter Account

↓

Auto Resolve Name

↓

Enter Amount

↓

Confirm

Large emphasis on recipient name.

The merchant should feel confident before sending money.

Transaction History

Think messaging app.

Newest first.

Each payment displayed as a card.

Example

↑ ₦5,000

Adeyemi

2:35 PM

Successful

Transfers use different icons from collections.

Incoming

↓

Green arrow.

Outgoing

↓

Blue arrow.

Empty States

Never boring.

Example

"No payments yet today.

Your next payment will appear here instantly."

Loading States

Avoid spinners.

Prefer skeleton loaders.

Payment waiting screen should instead show a subtle pulsing indicator.

Sound Design

The confirmation sound should become part of the brand.

Sequence

Soft chime

↓

Voice confirmation

Never use loud alarm sounds.

Accessibility

- Large tap targets
- High colour contrast
- Screen reader labels
- Responsive text scaling
- Offline indicators

- Connection status always visible

Component Library

Core components include:

- Amount Display
- Payment Status Card
- Virtual Account Card
- QR Card
- Transaction Card
- Transfer Form
- Merchant Header
- Status Badge
- Bottom Navigation
- Voice Indicator
- Connection Banner
- Confirmation Modal

Each component should remain reusable and independent.

Technical Frontend Architecture

```
src/  
|  
├─ app/  
├─ components/  
|   ├─ payment/  
|   ├─ transfer/  
|   ├─ transaction/  
|   ├─ dashboard/  
|   └─ common/  
|  
├─ hooks/  
├─ services/  
|   ├─ api/  
|   └─ sse/  
|  
├─ store/  
├─ pages/  
├─ layouts/  
├─ lib/  
├─ utils/  
└─ types/
```

```
|— assets/  
|— styles/
```

Feature-based organisation should be preferred over grouping by file type.

Frontend Principle

Every screen should answer one question:

Can the merchant complete this transaction with confidence in under five seconds?

If the answer is no, simplify the interface.

The ultimate goal of ConfirmAm is not to impress users with features, but to remove uncertainty from every transfer by delivering an experience that feels as immediate, trustworthy, and effortless as using a traditional POS terminal.
